🌟 **Poppy Universe Expands Its Observation Network**

Our catalog just grew. More stars, planets, and moons have been added to Poppy's observation database, giving you richer recommendations and deeper exploration options. The universe just got a little bigger.

🧠 **Poppy's Recommendation Engine — Ongoing Refinements**

Poppy is getting smarter. We're actively refining how trend signals, familiarity patterns, and hidden matches are combined, resulting in more accurate and personal recommendations across all layers.

🛰️ **Deep Space Scanner: Feature Enhancements**

The Deep Space Scanner has received backend improvements for faster object detection and cleaner results. Expect smoother scans, clearer classifications, and more reliable discoveries.

🌠 **Explorer Activity Highlights**

Several explorers recently interacted with rare and high-interest celestial objects. These interactions help Poppy learn what truly captures attention, improving future recommendations for everyone.
🔭 **Stargazing Forecast Improvements**

We're enhancing how atmospheric conditions influence visibility predictions. Forecasts now better reflect real-world stargazing conditions, helping you choose the perfect moment to observe.

🧭 **UI & Navigation Updates**

Small but meaningful improvements have been deployed across the site. Navigation is smoother, exploration paths are clearer, and key features are easier to access—especially on data-heavy pages.

| POPPY UNIVERSE

🚀 **What's Next**

Upcoming updates will focus on deeper object comparisons, richer encyclopedia entries, and tighter integration between exploration tools and recommendations. Poppy is watching the data closely.
